Section 1. Introduction

1.1 Project Overview

Basic description of project that we have group of students and teacher want to manage his work with his secretaries and students in its center. He want to use an Information system to do this management between him and others.

this decision come from a lot of wasted time and huge efforts from secretaries to take attendance of students and record result of exams and quizzes day by day in papers . Also there exist wasted time with teacher because of meetings with each student's parent to ensure from his son/daughter's level.

Therefore, we come with web application to make students register to book their place in center. In other hand, Secretary do its work in simple and effective interface to ensure students data and record exams and quizzes degree and students money. In addition, system give secretary and each student's parent report for each student about attendance and results from exams and quizzes.

1.2 Project Scope

We focus in this system to facilitate work done by teacher and secretary with students and each student's parent. There are our basic focus functions
1- Making students register with full information needed by teacher

2- Do basic secretary work by record attendance results.

3- Extract reports for Exams and quizzes results and attendance.

4- Let each student' parent login with student id to get the reports.

Therefore, we can minimize wasted time for teacher and secretary but there are some functions we did not focus on it such as :

1- Marking Exams and quizzes and get direct result for each student.

2- Making exams for each student level.

3- Taking attendance automatically while student enter the center.

1.3 Assumptions

There are a number of assumptions before we start to work on this project in order to ensure that the proposed system works properly. These Assumptions are:

1. Students already register and submit its personal data.
2. Teacher add its secretaries to do their work.
3. Secretary add needed information for exams and quizzes with its results and attendance.
4. Parents log in with student id to extract his student's reports.

1.4 Constraints

There are number of constraints that put limits on system Basic functions such as

1- Teacher must add secretary first to let him log in and do its work.
2- Secretary must add students and confirm their personal information with unique id for each one them.
3- Secretary add results of exams and quizzes for each student with attendance day by day to get appropriate reports.
4- Parents must have student id to get his reports.
